# **Data Structure and Algorithm**

#### EG2202CT

Year: II Total: 7 hours/week
Part: II Lecture: 3 hours/week
Tutorial: 1 hour/week

Practical: hours/week
Lab: 3 hours/week

## **Course Description:**

The purpose of this course is to provide the students with the basic concepts of data structures and algorithms. The main objective of the course is to teach the students how to select and design data structures and algorithms that are appropriate for problems that might occur. This course offers the students a mixture of theoretical knowledge and practical experience.

### **Course Objectives:**

On completion of this course the students will be enabled to:

- 1. Introduce data abstraction and data representation in memory.
- 2. Discuss, design and use elementary data structures such as stack, queue, linked list, tree and graph.
- 3. Decompose complex programming problems into manageable sub-problems.
- 4. Introduce theory of algorithms and their complexity.

#### **Course Contents:**

### **Theory**

# Unit 1. Introduction [2 Hrs.]

- 1.1. Algorithm and its types
- 1.2. Data structure and its types
- 1.3. Tools for algorithm analysis (Big O Notation)
  - 1.3.1. Type of analysis: Time and space complexity
  - 1.3.2. Asymptotic Notations: Big- O, Big- $\Omega$  and Big- $\theta$

### Unit 2. Stack and Queue

[6 Hrs.]

- 2.1. Stack and Operation
  - 2.1.1. Continuous implementation of Stack with varying and fixed TOS
- 2.2. Application of Stack
  - 2.2.1. Converting Infix to Post fix expression
  - 2.2.2. Evaluating Post Fix expression
- 2.3. Queue and Operation
  - 2.3.1. Definition
  - 2.3.2. Algorithm of Enqueue and dequeue
  - 2.3.3. Linear Oueue
  - 2.3.4. Circular Queue
  - 2.3.5. Priority Queue
  - 2.3.6. Applications of Queue

## Unit 3. List [8 Hrs.]

- 3.1. Definition and Structure of link list
- 3.2. Advantage and disadvantages of link list

3.3.	Operations in Singly Linked list 3.3.1. Insertion at the beginning and end, after the node, before the node 3.3.2. Deletion at the beginning and end, after the node, before the node	
3.4.	Doubly linked list 3.4.1. Definition	
	3.4.2. Structure of doubly linked list	
	3.4.3. Insertion at the beginning and end, after the node, before the node	
	3.4.4. Deletion at the beginning and end, after the node, before the node 3.4.5. Advantages and disadvantages	
	Recursion	[3 Hrs.]
	Properties of recursion	
	Recursion vs Iteration	
	TOH and its solution	
4.4.	Solution of Fibonacci sequence and factorial	
Unit 5.	Trees	[6 Hrs.]
	Tree concepts	[0 11150]
	Binary tree	
	Application of binary tree	
	Node representation	
	Operation in Binary Tree	
0.0.	5.5.1. Insertion	
	5.5.2. Deletion	
5.6.	Algorithm of tree search	
	Tree traversals	
	5.7.1. Pre order	
	5.7.2. In order	
	5.7.3. Post order	
5.8.	Height, level and depth of tree and its importance	
	AVL balance tree	
	5.9.1. Definition	
	5.9.2. Detection of unbalance	
	5.9.3. Single and double rotation in balancing	
IIn:4 6	Conting	[ <b>6 II</b> ma 1
6.1.	Sorting Definition	[6 Hrs.]
6.2.		
	Types of sorting (Internal and external)	
6.4.	Algorithm of Bubble sort	
6.5.	Algorithm of Insertion sort Algorithm of Selection sort	
	Algorithm for Quick sort	
6.7.		
	Algorithm for Merge sort	
6.8.	Algorithm for Heap sort	
Unit 7.	Search	[7 Hrs.]
7.1.	Sequential search	
7.2.	Binary search	
7.3.	Tree search algorithm	
7.4.	Hashing	

- 7.4.1. Definition
- 7.4.2. Hash function and Hash table
- 7.4.3. Collision in Hashing
- 7.4.4. Collision Resolution Techniques (Open and Closed)

Unit 8. Graph [7 Hrs.]

- 8.1. Components of Graph
- 8.2. Directed and Undirected
- 8.3. Connected and Unconnected
- 8.4. Path and Cycle
- 8.5. Adjacency sets and tables
- 8.6. Array based representation
- 8.7. Linked based and mixed implementation
- 8.8. Minimum Spanning Trees:
  - 8.8.1. Kruskal's Algorithms and prim's algorithm
  - 8.8.2. Algorithm of graph traversal (Depth First traversal, Breadth First traversal)
  - 8.8.3. Shortest path algorithm

Practical: [45 Hrs.]

- 1. Implement stack using array
- 2. Implement linear and circular queue
- 3. Solve TOH & Fibonacci sequence using recursion
- 4. Implement linked list: singly and doubly
- 5. Perform basic operations on a binary tree data structure.
- 6. Implement binary search using function and without function.
- 7. Implement Hashing for handling the collision.

Final written exam evaluation scheme				
Unit	Title	Hours	Marks Distribution*	
1.	Introduction	2	4	
2.	Stack and Queue	6	11	
3.	List	8	14	
4.	Recursion	3	5	
5.	Trees	6	11	
6.	Sorting	6	11	
7.	Search	7	12	
8.	Graph	7	12	
	Total	45	80	

<sup>\*</sup> There may be minor deviation in marks distribution.
